Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1-6 and 14-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Nilsson (2001/0045322). Nilsson teaches a muffler body (Figure 1, #1); an upstream pipe (2), an end portion thereof is opened in the muffler body (1); a downstream pipe (6), an end portion (5) thereof is opened in the muffler body (1); and an opening formed in a side face of the downstream pipe (6) in the muffler body (10), the opening formed in a belt-like elongated area (6a) extending substantially along a main axis of the downstream pipe (6) and comprising a plurality of small holes (9) substantially arranged at regular intervals in said main axis, wherein the elongated area (6a) is directionally stretched in a circumferential direction of the downstream pipe (6) and is evenly distributed in a substantial main axis direction of the downstream pipe (6) (Page 3, [0032]).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Art Unit: 2837

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 8-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nilsson (2001/0045322). Nilsson is relied upon for the reasons and disclosures set forth above, and further teaches the opening has an opening ratio in a range from 10% to 20%. Nilsson fails to teach the opening has an opening ratio in a range from 20% to 40%. However, It would have been obvious to one of ordinary skill in the art at the time the invention was made to have an opening ratio in a range from 20% to 40%, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or working range involves only routine skill in the art. In re Aller, 105 USPQ 233.

3. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nilsson (2001/0045322) in view of Miles (2,095,999). Nilsson is relied upon for the reasons and disclosures set forth above. Nilsson fails to teach wherein the opening comprises a slit formed in the elongated area. Miles teaches a slit (Figure 1, #24) formed in an elongated area (Col. 2, Lines 15-17). It would have been obvious to one of ordinary skill in the art at the time of the invention to combine the apparatus of Nilsson, with the apparatus of Miles to change the acoustic boundary conditions.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Pertinent arts of record relating to mufflers are disclosed in the PTO-892.
